## *Substantially increase your clientele*

A very real concern for a lot of people is the inability to conceive a baby. Each year, more than a million North Americans pursue treatment for “infertility.” Most consult conventional doctors—an infertility workup is conducted—and depending on diagnosis—drugs or high-tech procedures such as IVF are recommended.

Great strides have been made recently in Assisted Reproductive Technology (ART). A range of medical options are available, however, despite the progress that has been made in the treatment of “infertility,” the success rate for those who undergo high-tech procedures such as IVF is currently **about 20%**.

To boost this success rate and have the very best chance of conception, women are seeking out complementary treatments such as acupuncture, homeopathy, herbal remedies, and mind/body approaches. One of the most powerful of these is hypnosis. Hypnosis goes beyond simple guided imagery, and working with a skilled hypnotist following the guidelines of this unprecedented program not only **increases the odds of conception but also enhances overall health**.
